- **Знание - сила**

As with threat analysis, threat response requires a complete understanding of the security landscape and the business impacts.

- **Изучение угроз безопасности**

These include the external intelligence feeds that provide insight into the most recent developments in the global security landscape. It should provide the nature and severity of threats as well as actionable recommendations and advice.

- **Изучение специфики бизнеса**

Internal awareness and documentation of the risks associated with key business processes and the underlying supporting infrastructure underpinned by current corporate security policies, legal obligations, and compliance requirements by the industry or the regulatory bodies or both.

**Threat response is triggered by an escalation from threat analysis**

**Advanced threat analysis**

- Threat analysis
- L1 triage
- L2-3 Impact analysis
- threat research
- Risk assessments
- Operational briefings

**• Threat Response**

- Level 2 event escalations
- Security monitoring
- Incident management
- Problem management

## • (Де)Централизованная реакция

The response to a threat or incident may be centrally coordinated by a single dedicated organization or it may be distributed around the enterprise. A centralized approach provides a mechanism for accountability and oversight that is more difficult in distributed models.

## • Координация и слаженность

An organized and effective response to an incident requires a collaborative effort both within the enterprise and in cooperation with external organizations.

## • Спланированные и отточенные действия

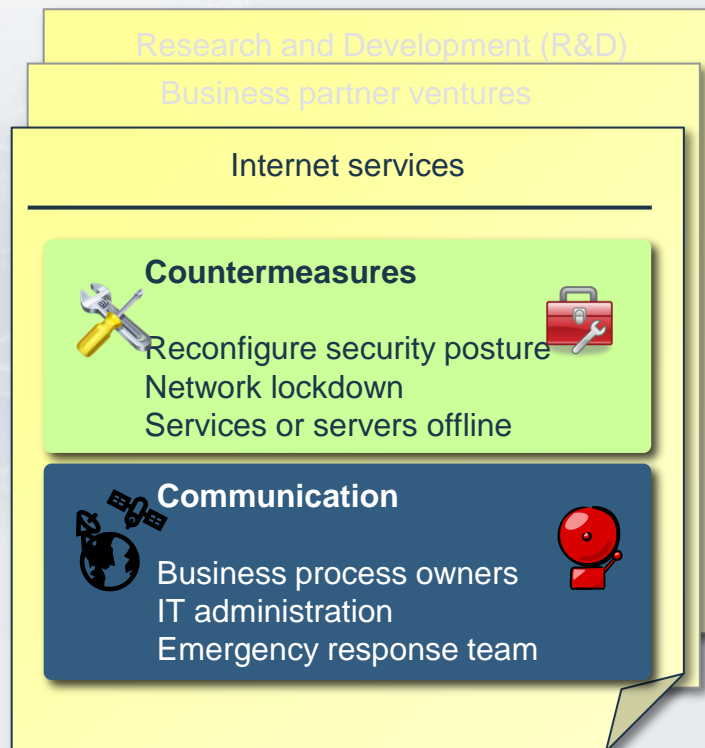

Using IT Business Continuity (BC) or Disaster Recovery (DR) plans as a model, threat response plans should be well-defined, regularly reviewed and maintained. It should also have executive approval and, where appropriate, tested to ensure efficacy.

- Реагирование
  - Intelligence
  - Coordination
  - Mitigation
  - Remediation
  - Resolution
- Выводы

- **Быстрые первые ответные действия**  
The first steps of any security incident response are comprised of actions designed to contain the threat and mitigate further risk exposure. First response actions require advanced planning and ideally include testing to ensure effective results.
- **Учитывайте специфику бизнеса**  
Containment and mitigation techniques will vary for every business process as actions that prove to be effective in one environment may not be effective enough in another environment.
- **Поддерживайте связь с руководством**  
A lack in communication to key stakeholders in the moments following a major security incident is commonly cited as a "lesson learned" in the post-mortem reports.

Business Unit (BU) or process-driven responses

  - Coordination
  - Mitigation
  - Remediation
  - Resolution
- Выводы

- **Определение и устранение факторов угрозы**  
It might take some time to eradicate the underlying vulnerability or weakness that allowed the incident to occur may take. The remediation component of threat response installs an enterprise-wide framework holding stakeholders accountable to correct core faults and prevent future activity.
- **Анализ причин возникновения инцидента**  
Research and discovery of the root causes of an incident are paramount to improving an enterprise's security posture. Root causes are rarely a failure in technology alone, rather those typically include procedural and human failure components as well.
- **Проведение расследования инцидента**  
Enlisting the assistance of a forensic or emergency response specialist may be required to preserve the chain of evidence and ensure eradication.

## Threat response

### Ликвидация – реактивна

component of threat response and ...

### Исправление - проактивно

component of threat response and includes patching, architectural redesign, and process improvement.

Исправление должно предотвратить появление повторных аналогичных инцидентов в будущем.

- Реагирование
  - Intelligence
  - Coordination
  - Mitigation
  - Remediation
  - Resolution
- Выводы

- **Описание инцидента и принятых действий**

The final stage of every incident response is documentation. All relevant aspects of the incident impact are documented including estimate of loss in terms of time, reputation or brand, and financial loss; containment and remediation steps taken; root-cause analysis; and outstanding tasks with accountable owners.

- **Обратная связь от бизнес-блоков**

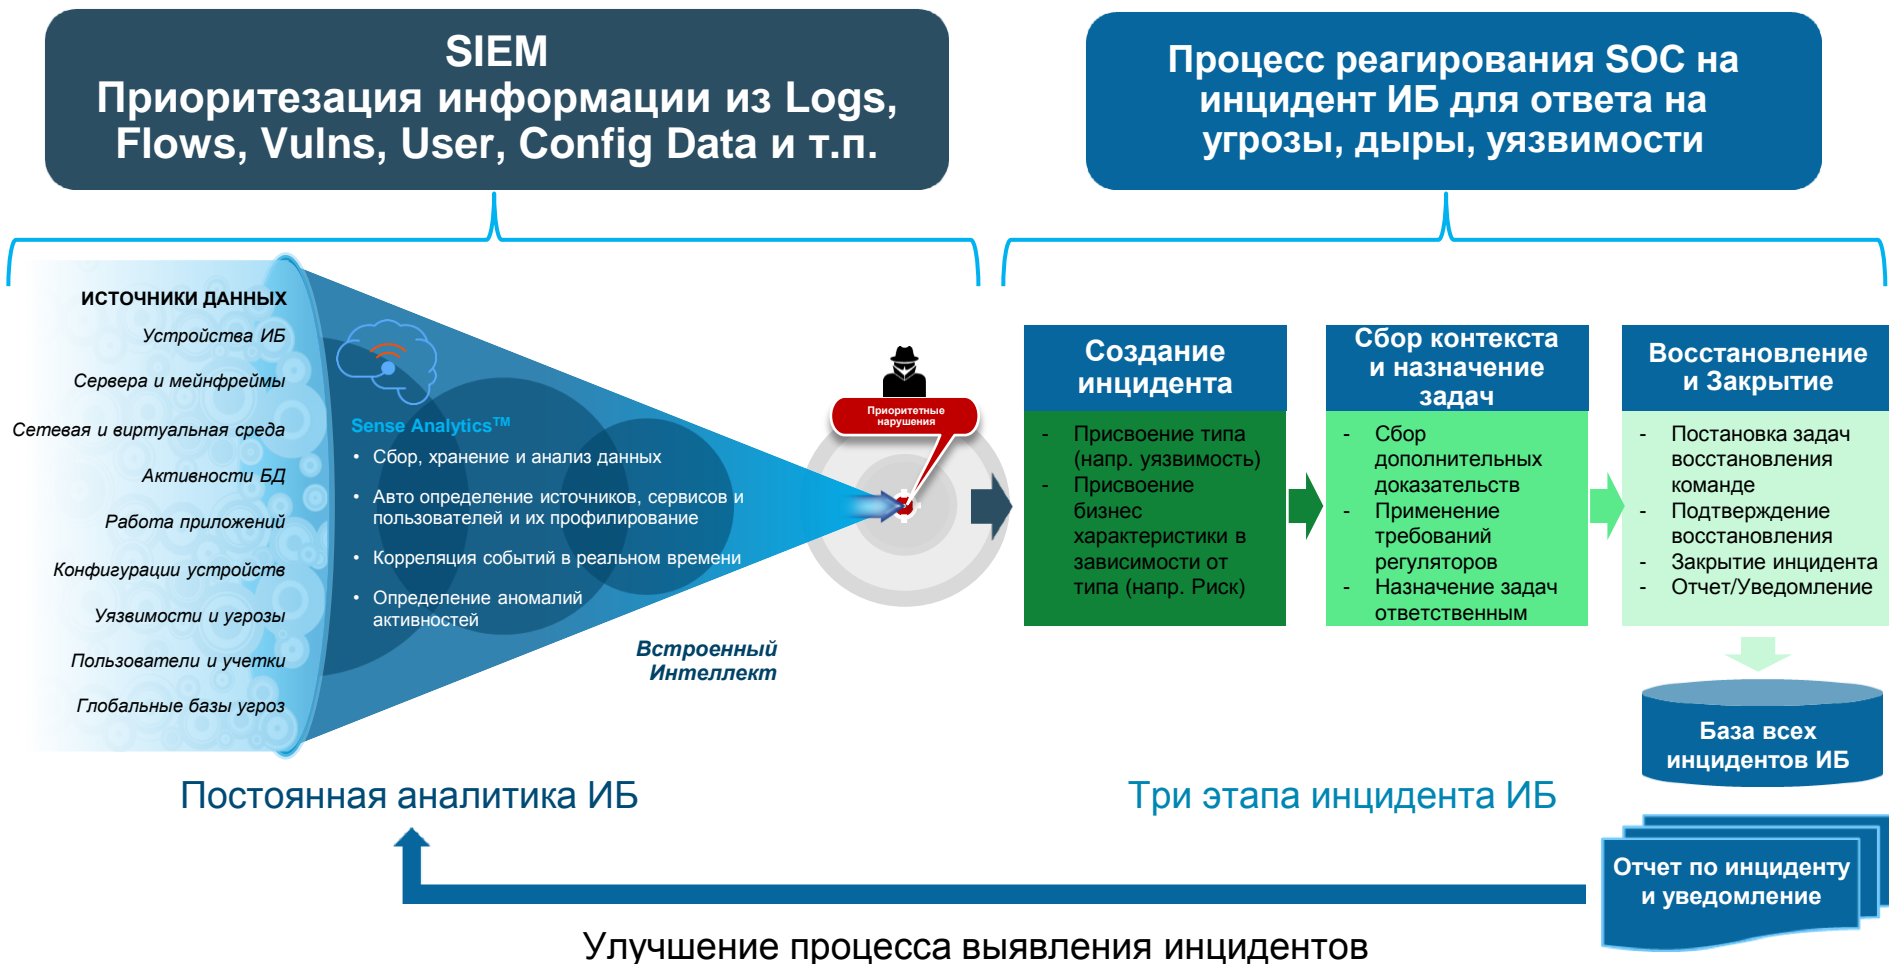

Post-escalation, it is imperative for the threat response team to receive feedback on it's response. This feedback closes the circuit on the investigation and provides invaluable material for both threat analyst and threat response education and process improvement.

- **Систематизация знаний, полученных при расследовании инцидента**

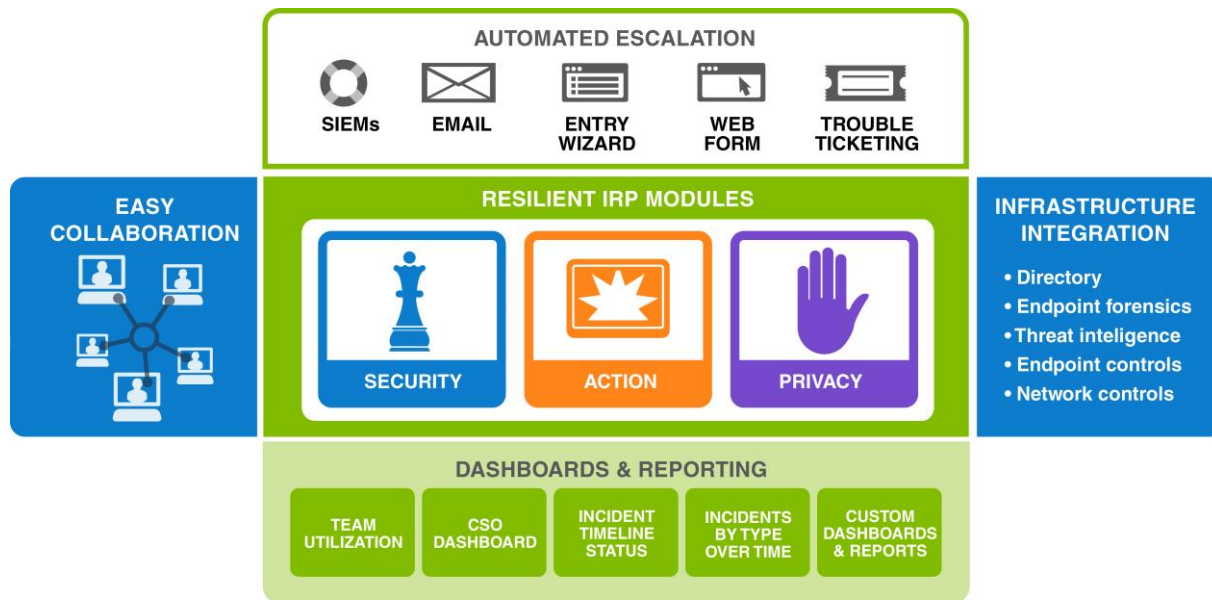

Every security investigation and escalation becomes input to all future investigations and creates a clean chain of evidence of monitoring activities.

# SIEM + Incident Response

# Платформа Resilient Incident Response Platform (IRP)

## Модуль SECURITY

- Стандарты workflows по индустрии (NIST, SANS)
- Подключение внешних баз знаний/угроз ИБ
- Стандарты организации
- Лучшие практики компании

## Модуль ACTION

- Автоматизация процессов
- Обогащить детали инцидента
- Сделать расследование
- Снизить нагрузку

## Модуль PRIVACY

- База регуляторов
- Требования нормативов
- Требования контрагентов
- Стандартные операции организации
- Лучшие мировые практики

***Новое!** Resilient Standard IRP создан для постепенного помодульного внедрения полной версии Resilient Enterprise IRP – более 140 внедрений в мире.*

- Цели SOC
- Задачи SOC
- Когнитивные технологии
- Реагирование
- **Выводы**

## Особенности и подводные камни

- Попытки построить Security Operations Center без поддержки высшего менеджмента компании не принесут желаемого результата
- Обязательно нужны цели запуска SOC и поэтапный план их достижения
- Разбейте цели на задачи, определите границы, рассчитайте минимальный и максимальный бюджет SOC
- Согласуйте деятельность SOC со смежными подразделениями
- На самых ранних этапах начинайте создавать команду SOC
- Документируйте процессы, чтобы упростить ротацию в команде
- Определите KPI и согласуйте их с руководством, будьте понятны для высшего менеджмента компании

Statement of Good Security Practices: IT system security involves protecting systems and information through prevention, detection and response to improper access from within and outside your enterprise. Improper access can result in information being altered, destroyed, misappropriated or misused or can result in damage to or misuse of your systems, including for use in attacks on others. No IT system or product should be considered completely secure and no single product, service or security measure can be completely effective in preventing improper use or access. IBM systems, products and services are designed to be part of a lawful, comprehensive security approach, which will necessarily involve additional operational procedures, and may require other systems, products or services to be most effective. IBM does not warrant that any systems, products or services are immune from, or will make your enterprise immune from, the malicious or illegal conduct of any party.
